

Section I New CNS field added to WMS Screen 1

A new field, Abbreviated CNS Notice Indicator, has been added to WMS data entry screens 1, WKBK01 and WKUM01, and inquiry screen WINQ19. This single character field has the label “ABBR”, and is immediately to the right of the CNS notice number. This field has also been added to both the WMS Authorization (LDSS-3209) and the APPTAD (LDSS-3636) forms and will print with the label “AB” in the white space immediately to the left of the Office Code field label.

This field is currently protected but will be used in the future to automatically trigger CNS notices with alternate, shortened language. As myBenefits and myWorkspace capabilities are enhanced, it is anticipated that some CNS notices will gradually be modified to print shortened text referencing information available on-line. Future correspondence will provide more information about when this new indicator should be entered.
